

REGISTRATION IS NOW OPEN

The European Academy of Tumor Immunology (EATI), Europe's largest cancer immunotherapy-specific academic organization is proud to organize this international event dealing with « **Infinite Dimensions – Spatially Resolved Multi-Omics in Tumor Immunology** ».

[PIO-2021](#) will deal with technological innovation within the burgeoning field of tumor immunology and immunotherapy, applicable to today's translational research and tomorrow's clinical routine. An international panel of high-carat speakers will discuss single cell DNA and RNA sequencing, the spatial resolution of omics technologies, the integration of novel single-cell omics methods (single-cell genomics, epigenomics, transcriptomics, proteomics and metabolomics...), as well as the extension of the field by top-notch analyses of the microbiota (analyzed by next-generation shotgun sequencing and culturomics) and its impact on the cancer-immunity dialogue.

The program will feature talks from more than 25 leaders in the field covering all areas of inquiry in cancer immunology and immunotherapy at the omics level.

Best regards,

Dr. Guido Kroemer, President Of EATI
